## SECTION I.—EGGS OF INSECTS.

### CHAPTER I.—INTRODUCTORY.

	Page
All insects come from eggs . . . . .	1
Curious experiment of Kircher . . . . .	2
Virgil's receipt for making a swarm of bees . . . . .	3
Origin of these ancient errors . . . . .	4
Bees in Samson's lion accounted for . . . . .	7
Fancies of Robinet and Darwin . . . . .	9
Theory of spontaneous generation . . . . .	10
Popular errors respecting <i>blight</i> . . . . .	11
Dr. Good's account of <i>blight</i> . . . . .	12
No insect eggs float in the air . . . . .	14
Specific gravity of insect eggs . . . . .	15
Theoretical accounts of honey-dew . . . . .	16
Accounted for by experiments . . . . .	18
Instantaneous appearance of insects . . . . .	19
The "worm i' the bud" traced to its egg . . . . .	20
Insectiferous winds . . . . .	22
Supposed showers of frogs, snails, &c. . . . .	23
Diffusion of the seeds of plants . . . . .	24
Insects jet out their eggs from fear . . . . .	25
Origin of mosses on walls . . . . .	27
Origin of mould in the heart of an apple . . . . .	30

### CHAPTER II.

Physiology of insects' eggs . . . . .	33
Theory of colours meant for concealment . . . . .	ib.
Disproved in the case of the eggs of birds . . . . .	34
Illustrated from insect eggs . . . . .	35
Cause of the colours in eggs . . . . .	36
Structure of insects' eggs . . . . .	38
Eggs of ants, spiders, and glow-worms . . . . .	39
Form of insect eggs . . . . .	40
Cause of the oval form in birds' eggs . . . . .	41
Sculpture of the eggs of insects . . . . .	ib.
Curious appendages to eggs . . . . .	43
Eggs with foot-stalks . . . . .	45
Number of insect eggs, and their fecundity, compared with other animals . . . . .	46

## CHAPTER III.

	Page
Maternal care of insects respecting their eggs . . . . .	49
Instanced in a carpenter-bee ( <i>Chelostoma</i> ) . . . . .	50
Ichneumons compared to the cuckoo . . . . .	52
Proceedings of a solitary bee ( <i>Halictus</i> ) . . . . .	53
Stratagems of a solitary wasp ( <i>Cerceris</i> ) . . . . .	54
Ovipositor of an ichneumon ( <i>Pimpla</i> ) . . . . .	56
Experiments of Réaumur . . . . .	57
Common mistakes of Naturalists . . . . .	59
Parasite of the cabbage-caterpillar ( <i>Pontia</i> ) . . . . .	61
Egg parasites . . . . .	63
Parasites of the aphides . . . . .	65
Singular parasite of the cockroach . . . . .	66
Rare parasites of bees and wasps . . . . .	67
Tact of insects in discovering food for their young . . . . .	68
Sometimes select exotic plants . . . . .	69
Instanced in a leaf-miner ( <i>Tephritis</i> ?) . . . . .	70
Solitary and gregarious caterpillars . . . . .	71
Life-boat of eggs constructed by the gnat . . . . .	72
Experiments upon it . . . . .	75
Infallibility of instinct questioned . . . . .	76
Mistakes of instinct . . . . .	77

## CHAPTER IV.

Hybernation of insects' eggs . . . . .	79
Proceedings of the gypsy-moth compared to the eider-duck . . . . .	ib.
Singular groups of eggs . . . . .	81
Protection of eggs from heat . . . . .	83
Anal tweezers of moths . . . . .	84
Eggs in spiral groups . . . . .	85
Arched form of the lackey-moth's eggs . . . . .	86
Hybernation of the eggs of aphides . . . . .	87
Singular protection of the eggs of cocci . . . . .	88
Coccus of the hawthorn . . . . .	90
Shell-formed coccus of the currant . . . . .	92
Hybernation of spiders' eggs . . . . .	93
Curious spiders' nests . . . . .	94
Eggs of the vapourer-moth on its cocoon . . . . .	95
Effects of cold on insects' eggs . . . . .	96
Observations of John Hunter . . . . .	98
Insects not killed by severe frosts . . . . .	ib.

## CHAPTER V.

Hatching of insect eggs . . . . .	100
Structure of the eggs of birds . . . . .	ib.
Insects do not hatch their eggs . . . . .	101
Anomalous instance of the earwig . . . . .	102
Earwigs cannot get into the brain . . . . .	103
Partial hatching by spiders . . . . .	104
Experiments upon the wolf-spider by Swammerdam and Bonnet . . . . .	105
Eggs hatched before they are laid . . . . .	108
Ovo-viviparous insects . . . . .	109
Coil of larvæ in the body of a blow-fly . . . . .	110
Aphides sometimes produce eggs, sometimes young . . . . .	112
Care taken of these eggs by ants . . . . .	113
