

AN INQUIRY
INTO
THE PRINCIPLES
OF THE
DISTRIBUTION OF WEALTH
MOST CONDUCTIVE TO
HUMAN HAPPINESS.

BY
WILLIAM THOMPSON,
AUTHOR OF "LABOUR REWARDED," "AN APPEAL OF WOMEN," &c. &c.

Third Edition,

PRELIMINARY OBSERVATIONS	xix

CHAPTER I.

<i>Investigation of the Natural Principles, Rules, or Laws, on which all just Distribution of Wealth ought to be founded; deduced from our organisation, and the circumstances, physical and social, which surround us</i>	1
Sect. 1. Labour is the parent of Wealth	5
Sect. 2. Object of the Distribution of Wealth is, or ought to be, to procure the greatest possible quantity of happiness for those who produce it	15
Sect. 3. But, all sane adults, male and female, are capable of equal happiness from wealth	17
Sect. 4. Therefore, the happiness of the greater number is to be preferred to that of the lesser number	20
Sect. 5. Wealth being produced by labour, sufficient stimulus must be given, in the way of motive, to render this labour most efficient in the production of wealth	23
Sect. 6. The strongest stimulus to production, and that which is necessary to the greatest production, is, <i>security</i> in the free direction, and <i>entire use</i> of the products of labour (see Sect. 12, page 80, for free Direction of Labour)	28
Sect. 7. Also, all <i>voluntary</i> exchanges of these products increase happiness from wealth, and thence the motives to its production	35
Sect. 8. On the other hand, the forced abstraction of these products diminishes happiness	46
Sect. 9. Smallest abstractions from numbers, to be enjoyed by one, also diminish happiness	54
Sect. 10. Therefore, <i>no part</i> of the produce of labour, should be taken from any producer without an equivalent by him deemed satisfactory	61
Sect. 11. Wealth should be so distributed as to produce the greatest <i>equality</i> , consistent with the greatest production	68
Sect. 12. To effect this, no artificial restraints or encouragements to the direction given to labour, or to the free interchange of its products, are necessary, and should not be permitted	80

	PAGE
Sect. 13. Inequality, as far as necessary to security, is useful, and should be upheld	110
Sect. 14. Inequality, not necessary to security, is pernicious, and should be repressed	117
Sect. 15. What should labourers pay for use of capital?	125
Sect. 16. General Inferences. Statement of Natural Laws of Distribution, "Free Labour, entire Use of its Products, and Voluntary Exchanges"	136

CHAPTER II.

<i>Of the Evils actually produced by forced Inequality of Wealth</i>	141
Sect. 1. Of the moral evils of forced inequality of wealth	142
Lessens sum-total of enjoyment from wealth	142
Does <i>not</i> add to the happiness of the rich	143
Engenders positive vices and consequent misery in the rich	145
Diffuses these and other vices through the rest of the community	147
Sect. 2. Of the economical evils of forced inequality of wealth	149
Its annual consumption is so much uncompensated loss	151
Sets in motion that species of industry which is the least useful	152
Sect. 3. Of the political evils of forced inequality of wealth	157
Necessitates the monopoly and misuse of political power	157

CHAPTER III.

<i>Of the collateral Benefits of the Natural Laws of Distribution ; viz. "Free Labour, entire Use of its Products, and Voluntary Exchanges ;"—that is to say, of Equality limited by equal Security</i>	167
Sect. 1. Political benefits of the Natural Laws of Distribution	167
They are incompatible with all but <i>representative</i> Institutions of Government	168
Would indispose nations to war ; but render them strong for defence	170
Would remove the strongest motives to the commission of crime	171
Would reduce to the lowest standard the expenses of the machinery of Government	172
Would render the support of all religious associations voluntary	174
Sect. 2. Economical benefits of the Natural Laws of Distribution	175
Production and capital would immensely increase	175
Joint Stock Associations of producers would be formed	182
Sect. 3. Moral benefits of the Natural Laws of Distribution	188
Peculiar <i>vices</i> of wealth and want would almost cease	188
Effects of these principles on "the rights of property"	195

CONTENTS.

V

PAGE

CHAPTER IV.

<i>Of the acquisition and diffusion of Knowledge, as one of the means of increasing production and enjoyment, and securing the permanence of the Natural Laws of Distribution</i>	198
Sect. 1. Connexion of knowledge with labour and wealth	198
Sect. 2. Of Social Institutions, as one of the means of diffusing or suppressing knowledge; and thence wealth and happiness	202
Sect. 3. Of Instruction, verbal or written, addressed to adults, as the second means of diffusing or suppressing knowledge. Obstacles to its progress	219
Sect. 4. Of Education, strictly so called, previous to manhood, as the third mode of diffusing knowledge, and thence wealth and happiness	232
Cost of an universal system of Education for Great Britain and Ireland	241

CHAPTER V.

<i>Of the present state of the Distribution of Wealth, as resulting from the Institutions of Insecurity; and of the means of reducing the existing forced expedients of unequal distribution to the voluntary mode, of Equality limited by Security</i>	249
Sect. 1. Of the <i>general evils</i> of the abstraction by political power, of the products of labour without the consent of the producers or owners of them; termed here <i>public</i> plunder, and shown to be more extensive, more difficult of cure, and consequently more pernicious, than <i>private</i> plunder	249
Sect. 2. Of those particular institutions or expedients, whose most obvious effect is to <i>generate</i> forced inequality of wealth—or that inequality not called for by equal security	250
Sect. 3. Of those particular institutions or expedients, whose most obvious effect is to <i>perpetuate</i> forced inequality of wealth	251
Sect. 4. Of those particular institutions or expedients, whose obvious effect is, both to <i>generate and perpetuate</i> forced inequality of wealth	251
Sect. 5. Of the means of reducing these existing expedients of <i>forced</i> unequal distribution to the <i>voluntary</i> mode of the Natural Laws of Distribution, inducing equality limited only by equal security	253

CHAPTER VI.

<i>Benefits and evils of the principle of Individual Competition in the production of wealth and happiness, as compared with that of Mutual Co-operation</i>	254
Benefits of Individual Competition	256
Evils of Individual Competition	257
