22 PRIZE MEDALS

Awarded for Excellence of Quality and Original Designs.

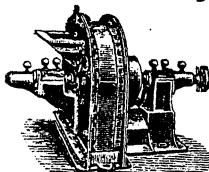

SPECIAL TOUCH MINERS DRILL STEEL.

Disintegrating and Grinding Machinery.

**THE
"DEVIL" DISINTEGRATOR & BONE GRINDER**
Is the BEST MACHINE

For Grinding almost any material to moderately
fine or coarse powders, giving at the same time
a large output.

The most important competitive
trial of Disintegrators ever held, took
place at the ROYAL AGRICULTURAL
SOCIETY OF ENGLAND SHOW, held at
Plymouth, June, 1890, when the
"DEVIL" was declared to be the
BEST MACHINE, and was awarded
the FIRST PRIZE and the SOCIETY'S
MEDAL.

There were EIGHT ENTRIES for
this Competition from the best makers
of this class of Machinery.
It is Cheap, Simple in Construction,
and not liable to get out of repair.
The Grinding Rings, which are the only
wearing parts, can be replaced by a
labourer, without lifting, at slight cost.

THE NEW MULTIPLE GRINDER

Is the Best Machine for Reducing Friable, Fibrous,
or Moist Materials to fine or Impalpable Powders.

WHEAT, MAIZE, RICE, BAR-
LEY, and other Grain may be
reduced to the fineness and soft-
ness of wheat flour.

SUGAR, BORAX, SALT, SODA,
&c., are ground finer than in any
other Mill.

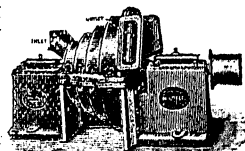

GLUE, SHELLAC, GELATINE,
can be reduced to almost any
degree of fineness.

ROOTS, BARKS, LEAVES, DY-
WOOD, MYRRHOLAM, PENU-
GREEN, ANISEED, LINSEED, COR-
TON-SEED, RAGS, and LEATHER are more evenly and satisfactorily ground
than in any other Machine.

There are few, if any, materials that this MILL will not deal with.

It grinds perfectly and quickly materials that clog up the ordinary
mills with grinds.

The wearing parts are simple, inexpensive, and easily replaced.

THE NEW MAGNETIC SEPARATOR

Is the MOST EFFECTIVE MACHINE for SEPARATING IRON and STEEL from any other MATERIAL.

Makers of Coal-washing and Coking Plants, Elevators, Elevator Buckets, Driving Chains, Conveyors,
Separators, Shafting, Pulleys, and all Apparatus connected with Grinding and Pulverising Machinery.

**BELDAM'S
CORRUGATED
METALLIC
VALVES.**

THE Valves, as fitted to Air, Circulating, Feed, Bilge, and other Pumps, will supersede Rubber Valves for every class of Pump, being much more durable and economical, as Rubber deteriorates in hot climates, even by being kept in stock, and becomes a serious item to users.

These Valves can be readily fitted to all existing Pumps, as no alterations are required to Seats or Rods. They are now extensively used by the Admiralty, and Merchant Steamers. In ordering, please forward Sketch of Valve Seats, Studs, and Rods, with dimensions.
