

**MARVELS
OF
POND-LIFE;
OR,
A YEAR'S MICROSCOPIC
RECREATIONS
AMONG THE
POLYPS, INFUSORIA,
ROTIFERS, WATER-BEARS,
AND POLYZOA.**

BY HENRY J. SLACK,

F.G.S., AUTHOR OF "THE PHILOSOPHY OF
PROGRESS IN HUMAN AFFAIRS," ETC, ETC.

LONDON:
GROOMBRIDGE AND SONS.
MDCCC LXI.

CONTENTS.

INTRODUCTION.....	5
DESCRIPTION OF FRONTISPIECE.	8
CHAPTER I. MICROSCOPES AND THEIR MANAGEMENT.	9

Powers that are most serviceable — estimated by focal length — length of body of microscope and its effects — popular errors about great magnification — modes of stating magnifying power — use of an "erector" — power of various objectives different eye-pieces — examination of surface markings — methods of illumination-direct and oblique light — stage aperture — dark ground illumination — mode, of softening light — microscope lamps-care of the eyes..... 9

CHAPTER II JANUARY.....	16
-------------------------	----

Visit to the ponds — confervæ — quina — vorticella — common rotifer — three divisions of infusoria — phytozoa — protozoa — rotifera — tardigrada — meaning of these terms — euglenæ — distinction between animals and vegetables — description of vorticellæ — dark ground illumination — modes of producing it — the nucleolus of the vorticellæ — methods of reproduction — ciliated protozoa — wheel bearers or rotifers — their structure — the common rotifer — the young rotifer seen inside the old one — an internal nursery — "differentiation" and "specialization" — bisexuality of rotifers — their zoological position — diversities in their appearance — structure of their gizzard — description of rotifers. 16

CHAPTER III. FEBRUARY.....	30
----------------------------	----

visit to hamstead — small ponds — water-fleas — water-beetle — snails — polyps — hidra viridis — the dippingtube — a glass cell — the hidra and its prey-chydorus shæricus and canthocaptus, or friends and their escapes — cothunia — polyp buds — catching polyps — mode of viewing them — structure of polyps — sarcodæ — polyps stimulated by light — are they conscious? — tentacles

and poison threads — paramecium — trachelius — motions of animalcules, whether automatic or directed by a will — their restless character.	30
CHAPTER IV. MARCH.	39
paramecia — effects of sunlight — pterodina patina — curious tail — use of a compressorium — metopidia — trichodina pediculus — cothurnia — salpina — its three-sided box — protrusion of its gizzard mouth.	39
CHAPTER V. APRIL.	47
the beautiful floscule — mode of seeking for tubicolar rotifers — mode of illuminating the floscule — difficulty of seeing the transparent tube — protrusion of long hairs — lobes — gizzard — hairy lobes of floscule not rotatory organs — glass troughs — their construction and use — movement of globules in lobes of floscule — chætonotus larus — its mode of swimming — coleps hirtus — devourer of dead entomostraca — dead rotifer and vibrotiones — theories of fermentation and putrefaction — euplotes and stylonichia — fecundity of stylonichia.	47
CHAPTER VI. MAY.	58
floscularia cornuta — euchlanis triquetra — melicerta ringens — its powers as brick-maker, architect, and mason — mode of viewing the melicerta — use of glass cell — habits of melicerta — curious attitudes — leave their tubes at death — cackhesium — epistylis — their elegant three forms — a parasitic epistylis like the "old man of the sea" — halteria and its leaps — aspidisca lynceus.	58
CHAPTER VII. JUNE AND JULY.	64
lindia torulosa — cecistes crystallinus — a professor of deportment on stilts — philodina — changes of form and habits — structure of gizzard in philodina family — Mr. Gosse's description — motions of rotifers — indications of a will — remarks on the motions of lower creatures — various theories — possibility of reason — reflex actions — brain of insects — consensual actions — applications of physiological reasoning to the movements of rotifers and animalcules. ...	64
CHAPTER VIII. AUGUST.	70
mud coloured by forms — their retreat at alarm — a country duck-pond -contents of its scum — cryptomoxads —	

their means of locomotion — a triarthra (three-limbed rotifer) — the brachion or pitcher rotifer — its striking form — enormous gizzard — ciliary motion inside this creature — large eye and brain-powerful tail — its functions — eggs.... 70

CHAPTER IX. SEPTEMBER..... 78

microscopic value of little pools — curious facts in appearance and disappearance of animalcules and rotifers — mode of preserving them in a glass jar — fragments of melicerta tube — peculiar shape of pellets — amphileptus — scaridium longicaudum — a long tailed rotifer — stephonoceros eichornii — a splendid rotifer — its gelatinous bottle — its crown or tentacles — retreats on alarm — illumination requisite to see its beauties — its greediness — richly-coloured food — nervous ganglia. 78

CHAPTER X. OCTOBER. 85

stentors and stephanoceri — description of stentors — mode of viewing them — their abundance — social habits — solitary stentors living in gelatinous caves — propagation by divers modes — limnias ceratophylli — another tube-dwelling rotifer — young and old specimens — a group of vagincolæ — changes of shape — a bubble-blowing vorticella..... 85

CHAPTER XI. NOVEMBER. 93

characteristics of the polyzoa — details of structure according to allman — plumatella repens — its great beauty under proper illumination — its tentacles and their cilia — the mouth and its guard or epistome — intestinal tube — how it swallowed a rotifer, and what happened — curiosities of digestion — are the tentacles capable of sting? — resting eggs, or "statoblasts" — tube of plumatella — its muscular fibres — physiological importance of their structure..... 93

CHAPTER XII. DECEMBER..... 102

microscopic hunting in winter — water-bears, or tardigrada — their comical behaviour — mode of viewing them — singular gizzard — wenham's compresorium — achromatic condenser — mouth of the water-bear — water-bears' exposure to heat — soluble albumen — physiological and chemical reasons why they are not killed by heating and drying — the trachelius ovum — mode of swimming —

method of viewing — by dark-ground illumination — curious digestive tube with branches — multiplication by division — change of form immediately following this process — subsequent appearances.....	102
CHAPTER XIII. CONCLUSION.	111
